79% of Enterprises Report AI Agents in Production, but Only 15% Have Fully Tied AI Investment to P&L Outcomes

November 12, 2026

Genpact survey of more than 2,000 executives finds the barrier to AI value is operational, not just technological, and AI Leaders are tackling it with Agentic Operations

NEW YORK, Nov. 12, 2026 /PRNewswire/ -- Genpact (NYSE: G), the Agentic Operations company, today released a research report, *Autonomy in Practice: How agentic operations can turn AI progress into business value*, based on a survey of more than 2,000 enterprise executives across 17 industries. It finds that AI agents have reached production faster than enterprises have redesigned how they operate, and most are not yet capturing the autonomy dividend: the value that comes when AI-enabled gains translate into better business performance, not simply greater productivity.

Key findings from Genpact's *Autonomy in Practice* report:

- **79%** of enterprises surveyed have AI agents in production, but just **20%** use them broadly and consistently across functions.
- Only **15%** have fully tied AI investment to P&L outcomes.
- On average, just **49%** of AI initiatives funded in the past 24 months have delivered the value expected.
- Only **9%** have completed significant operating model transformation.
- AI now leads or fully runs **40%** of decisions, more than double a year ago, yet humans still decide or audit in at least **87%** of cases at every decision stage.
- Agents are scaling alongside people: **92%** of respondents with agents in production kept their human workforce the same size or grew it.

The findings show that autonomy in practice is not full autonomy. It is deciding deliberately where agents act, where people decide and validate, and what business outcomes the hybrid workforce produces.

AI Leaders, the **17%** of enterprises at the top of Genpact's AI Maturity Index, are further along in building Agentic Operations: the operating model that runs people and agents as one workforce. Genpact's research measured five building blocks critical to this model, but most enterprises have not yet connected them.

What AI Leaders do differently

Backed by a CEO-level mandate, AI Leaders are ahead on all five building blocks. They:

- **Reinvent work across the enterprise**, not function by function.
- **Build the human-agent workforce deliberately,** creating new roles such as exception specialists and agent trainers.
- **Strengthen the data and AI foundation for repeatable scale,** giving agents access to act across systems, not just

retrieve information.

- **Govern and secure** agents throughout their lifecycle, not just at deployment.
- **Make value capture a P&L discipline,** tying AI-enabled gains to named owners and P&L lines.

"Enterprises have become effective at deploying AI agents. Running them is the hard part," said **Sanjeev Vohra, Chief Technology and Innovation Officer, Genpact**. "Agentic Operations connects AI with context-rich process intelligence, human judgment, and governance to capture the autonomy dividend."

About the survey
The study, conducted in 2026, surveyed senior executives at companies with annual revenues from $1 billion to more than $50 billion across 17 industries and 14 business functions, supplemented by in-depth interviews with enterprise leaders. Findings are self-reported; percentages are rounded.
